Re: Bunker Hill Mine Operations Area  
Remedial Action  
Bunker Hill Mine Operations Area Asbestos Survey

Dear Ms. Stoupa,

As you may know, Rust Remedial Services Inc. (RRS) is the prime contractor for the current remediation project at the Bunker Hill Mine Operations Area (MOA). In order to complete our administrative record for the work we are performing at the MOA, we will need a copy of the environmental reports or drawings which were used by CH2M Hill in preparation of the Contract Documents with respect to the Asbestos work we are contracted to perform (reference Section 6.2.3 of the Instruction to Bidders for the MOA work). I am particularly interested in the information used to arrive at the areas and quantities identified in Item 2 of the Bunker Hill Mine Operations Area Specification (i.e. the MOA Asbestos Estimated Quantities). In addition, a copy of the work plan or procedures used to perform the asbestos survey for the MOA would be very helpful.

RRS will be meeting with the EPA Air and Toxics Division on November 9, 1994 to discuss the asbestos abatement work at the MOA. It would be very helpful if you could provide these documents in advance of that meeting. Please forward the documents to my office at the following address:
